

Health Care Satellite Account (HCSA)

Plotted

Blended Account, 2000-2021

Updated: 01-08-2024

Bars:

Spending [\$100B] – Spending in a hundred billion dollars for a condition.

Lines:

Per Capita Index – Amount spent per person in the U.S. for a condition, indexed to the year 2000.

Per Case Index – Amount spent per episode of care for a condition, indexed to the year 2000.

Prevalence Index – Number of episodes for a condition, indexed to the year 2000.

The example graph above, ‘Other care and screening’, can be interpreted as: spending in 2021 totaled over \$400 billion. In 2021, per capita spending was six times as much as it was in the year 2000. In 2015, per case spending is 2 times as much as it was in the year 2000. In 2020, treated prevalence was approximately 50% more than it was in the year 2008.

All graphs show estimates net of manufacturer rebates for branded prescription drugs. Aggregated AHRQ component category graphs are in pages 3 to 9. Detailed disease levels are from pages 10 through 78.

The vertical line shown at 2015 reflects the fact that the data after the last quarter of 2015 are based on the updated International Classification of Diseases (ICD-10). Prior years’ data were based on the earlier classification system (ICD-9). Users should exercise caution when comparing earlier estimates to data from 2015 or later. More information on the transition can be found at the Agency for Healthcare Research and Quality (AHRQ): https://www.hcup-us.ahrq.gov/tools_software.jsp
