the BUSINESS SITUATION

AGGREGATE demand and production are increasing substantially in the current quarter, mainly because of rising consumer expenditures, advancing government outlays, and the recovery in business spending for new plant and equipment. At present, not enough information is available to show what is happening to total inventory investment, but the increase in output undoubtedly reflects chiefly the upsurge in final sales. This is in contrast to the fourth quarter of 1967, when the rise in inventory investment accounted for one-third of the gain in current dollar GNP, and final sales showed their smallest quarterly increase of the year. With demand buoyant and pressures on costs continuing, prices are advancing at the rapid pace evident in the second half of 1967.

A strong demand for labor is accompanying the increase in output, and the overall rate of unemployment remains low. Excess capacity is still a depressing influence on investment in a number of industries, but it is not enough to offset the stimulating effects of rising output and profits. The latest OBE-SEC survey (pp. 10-14) indicates that the investment decline in the first three quarters of 1967 was reversed in the closing quarter of last year and that businessmen are scheduling moderate increases in outlays in both halves of 1968. If anticipations materialize, current dollar outlays for the full year will be 6 percent higher than in 1967.

Most of the broad measures of economic activity now available for February registered an improvement over January, after seasonal adjustment. Employment and payrolls advanced much more in February than in Janu-

ary, and there was a further increase in retail sales, according to advance reports, after a considerable rise in the preceding month. However, industrial production was about unchanged following a rather sharp decline the month before.

Retail sales buoyant

The February sales figures, like those of the month before, reflected increases in durable and nondurable goods stores, which brought retail sales in the middle of the first quarter to a rate 4 percent above the fourth quarter average. It should be noted that fourth quarter 1967 sales had shown no improvement over the third. On the basis of the data for the first 2 months of 1968, it is obvious that personal consumption expenditures in the current quarter will advance considerably over the fourth quarter. Part of this rise will be due to an improvement in automobile sales. Sales of new domestically produced cars in January and February were at a seasonally adjusted annual rate of about 8¼ million units, as compared with a rate of 7.3 million in the strike-depressed October-December period.

Income up sharply

It should not come as a surprise that consumer buying is finally showing an improvement in view of the rapid increase in the flow of income since last fall. In February, personal income advanced at a seasonally adjusted annual rate of \$7½ billion, following increases of \$6.5 billion in November, \$6.9 billion in December, and \$1.6 billion in January. Although recent monthly changes have been affected by special circumstances—the recovery from the auto strike in November, the payment of the retroactive Federal pay increase in December, the bad weather in January, and the rise in the Federal minimum wage in February—the underlying trend in income is strongly upward.

CHART 1
Businessmen Expect for 1968

- A 6 percent rise in investment outlays over 1967
- Second half of 1968 to be above first
- Large sales increases over 1967

*Anticipated
Data: OBE-SEC
U.S. Department of Commerce, Office of Business Economics 68-3-1

The bulk of the income advance in February occurred in wage and salary disbursements, which rose \$6.3 billion as a result of the combined effects of higher employment, higher hourly earnings, and a longer workweek. Payrolls increased substantially in all private industry groups and were moderately higher in the public sector. Nonpayroll incomes were up slightly on balance, with property incomes and transfer payments each rising about \$½ billion. Although prices received by farmers increased further in February, farm proprietors' income was about unchanged for the third straight month. The February rise in seasonally

adjusted establishment employment was particularly sharp. The increase of about 550,000 employees was spread over all major industry groups, but nearly one-half of the total gain occurred in contract construction, where extreme cold in mid-January depressed employment.

Manufacturing industries showed a net addition of 65,000 workers in February, despite some work stoppages. A decline of 30,000 in the stone, clay, and glass products group—caused by a strike of glass bottle workers that began on February 1—held the overall employment advance in durable goods manufacturing to 20,000; employment in nondurables was up by 45,000, with the major gain in textiles and apparel. Employment in most other important private industries and in government continued to rise in February, the largest increases occurring in retail trade, services, and State and local government.

Increase in minimum wages

Although the large advance in payroll incomes was due mainly to higher employment and a longer workweek, hourly earnings also edged up. The rise in earnings partly reflected increases in Federal minimum wage rates effective February 1, as provided by the 1966 amendments to the Fair Labor Standards Act. The U.S. Department of Labor estimates that more than 7 million workers received a pay raise as a direct result of the revised wage rates. An unknown number of workers should benefit indirectly from the new minimum since a rise in the basic rate usually leads to other increases designed to maintain previously existing pay differentials.

The 1966 amendments—which became effective in February 1967—not only provided for a series of annual increases in the minimum wage but, among other things, also increased the number of covered workers. Coverage was extended to approximately 6 million workers in the service, construction, and trade industries; this included 2 million employees of non-Federal hospitals and nursing homes and 2¼ million workers in retail outlets. In addition,

about 2½ million government employees—approximately 1 million in public schools—were newly covered, as were ½ million workers on large farms, for a grand total of nearly 9 million.

The minimum hourly rate applicable to about 33 million nonsupervisory employees in enterprises that had been required to pay the Federal minimum prior to the 1966 amendments advanced 20 cents to \$1.60 an hour on February 1, 1968. This followed a 15-cent increase in the preceding year. Almost 6 million covered workers received pay increases this February totaling an estimated \$2 billion (annual rate) because their earnings were below the new minimum. Also on February 1, the minimum wage of nonsupervisory employees in enterprises to which coverage was extended in 1967 was raised from \$1.00 to \$1.15 an hour. About 1.3 million workers of the nearly 9 million newly covered employees in these industries will receive a total of \$325 million more (annual rate) from the new minimum. Next year, a further increase to \$1.30 per hour is scheduled for these workers.

Industrial production little changed

Industrial production rose very little in February after seasonal adjustment, as a slight decline in manufacturing output about offset increases in utilities and mining. Strikes in the motor vehicle and glass industries were important in the manufacturing dip.

Steel output rose about 1 percent in February after a decline in January. Hedge buying by steel users appears to be increasing. During January (the latest month for which inventory data are available) stocks of finished steel held by manufacturing consumers increased by 600,000 tons, after seasonal adjustment, for the largest month-to-month advance since the current inventory buildup began early in the fourth quarter of 1967. Stocks held by producing mills stayed at about the January level, after increasing almost steadily for more than a year. For mills and manufacturing consumers combined, the January increase in steel stocks was moderately above the fourth quarter average.

CHART 2
Payrolls Expand Sharply in the First Quarter

*Includes estimates for March.

In the automobile industry, strikes in plants of some major producers again held production of motor vehicles well below planned schedules. Assemblies of passenger cars and trucks in February totaled 860,000 units, down from 970,000 in January. After seasonal adjustment, the decline over the month amounted to about 2 percent; however, for January and February combined, output was well above the strike-depressed fourth quarter of 1967. March production programs for passenger cars call for about 800,000 completions, which would be substantially above the seasonally adjusted February rate.

Price rise continues

Prices of goods and services have continued to increase at a rapid pace in early 1968. According to preliminary data, the wholesale price index advanced 0.6 percent from January to February as a result of increases in farm and food products and industrial commodities. The consumer price index was up 0.3 percent in January.

Prices of farm products and processed foods, which fluctuated in a fairly narrow range in 1967, have risen slightly this winter. Wholesale prices of industrial commodities increased 0.4 percent in both January and February, well above the rate of increase in the second half of 1967. Increases have been widespread among the commodity groups. The high level of production in the steel industry strengthened demand for steel scrap, and the long strike in the copper industry has led to higher prices for a number of copper-containing products. Other significant price increases in the early part of 1968 occurred for new cars and trucks, and crude oil and home heating oil. In contrast, there were reductions for synthetic and natural rubber and a few chemicals.

The consumer price index continued up in January, with large advances in the prices of foods and services. The

pace of the consumer price advance appears to have been fairly steady since the spring of 1967, at about 0.3 percent per month. In January, price increases for foods were widespread, with the most sizable advances for fresh vegetables, poultry, and fresh milk. Among nonfood commodities, auto dealers boosted new car prices in January, and apparel prices declined, but much less than they normally do. Increases in service prices in January reflected higher postal rates, boosts in hospital service charges in many areas, increases in a number of medical insurance plans, and higher taxicab fares.

Domestic financial developments

The effects of large Treasury operations dominated the financial scene in February. Aside from the normal turnover of short-term bills, the Treasury entered the market first in mid-month with over \$5 billion in refunding and pre-refunding notes, and again on February 21 with nearly \$4.3 billion in new cash notes. During periods of large Government financing, it is customary for the Federal Reserve System to support the Treasury's operations by maintaining order and stability in financial markets. Such support generally involves the System in open market purchases of government securities, which can in turn lead to an expansion in member bank reserves. It was against this background that the monetary authorities moved toward a somewhat more restrictive stance in their credit policy. This move was reflected in a slightly slower growth in total member bank reserves than occurred a month earlier, in the transition during the month from a surplus to a deficit in free reserves, and in a leveling off in the money supply.

Although the total reserves of member banks grew less rapidly in February than in January, the advance was sufficient to allow an expansion of \$4

billion in commercial bank credit, most of it in the form of U.S. Government securities. Bank investment in such securities rose nearly \$3 billion, seasonally adjusted—a development reflecting largely the fact that commercial banks acquired roughly four-fifths of the \$4.3 billion Treasury note issue of February 21. The loan component of bank credit rose about \$1 billion last month, with loans to security dealers up rather sharply while growth in business loans was up only slightly.

Last month's modest move toward tighter credit had little impact on financing costs. During February, most rates and yields moved within very narrow ranges, showing little net change for the month as a whole.

Fourth quarter profits

According to preliminary data, corporate profits including IVA showed a sizable advance of \$3¼ billion in the fourth quarter, reaching a seasonally adjusted annual rate of \$83 billion. Frequently, yearend accounting adjustments affect fourth quarter profits, and a development of this kind may have influenced the latest increase. Much of the fourth quarter rise centered in manufacturing, where increases were widespread. The fourth quarter results indicate that profits recovered much of the ground they lost in the slowdown in the early part of 1967, and in view of the large rise in output now underway, it is fairly likely that they will record a new high in the current quarter.

Book profits, which exclude the IVA, rose \$5½ billion before taxes to reach a record \$85½ billion. After-tax profits, with a rise of \$3¼ billion, were also at a new high. Since dividends declined in the fourth quarter, the gain in retained earnings was an extremely large \$4¼ billion. This increase, coupled with the steady advance in depreciation, resulted in a record rate of cash flow to corporate business.

HISTORICAL DATA

Historical national income and product data are available from the following sources:

1929-63: *The National Income and Product Accounts of the United States, 1929-65, Statistical Tables* (available from any U.S. Department of Commerce Field Office or from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, price \$1.00 per copy).

1964-66: July 1967 SURVEY OF CURRENT BUSINESS.

Manufacturers' Inventory and Sales Expectations

First Half of 1968

MANUFACTURERS expect increases in their inventories in the first two quarters of 1968 to be larger than those in 1967. They continue to be quite optimistic about near-term sales prospects and considered their inventories on December 31, 1967, to have been in better balance relative to sales and unfilled orders than they were earlier in 1967. These are the major findings of the expectations survey conducted in February by the Office of Business Economics.

Manufacturers expect to add about \$2 billion to stocks both this quarter

and next, after seasonal adjustment. Each of these additions would be about \$400 million larger than in the fourth quarter of 1967. Mid-1968 inventories are expected to equal 1.77 months of anticipated second quarter 1968 sales—about the same as the ratio for the final 3 months of 1967 but lower than that of a year earlier.

Sales rose 2½ percent from the third to the fourth quarter of 1967—the best gain of the year despite the strike in the automobile industry. According to the current survey, factory sales are expected to rise 4 percent this quarter

and 2 percent the next. When the sales projections for the first half are compared with those for the full year 1968, as obtained from the plant and equipment reporting panel (page 10), a continued sales advance is implied for the second half of this year.

Manufacturers holding one-fourth of total stocks judged their inventories "high" on December 31, 1967. This proportion represented an improvement over the figures reported in the four previous surveys, but it was still large gaged by the experience from 1961 to late 1966. Seventy-two percent of producers' stocks were in the "about right" category at yearend, while the "low" group continued to be negligible at 3 percent.

Durable stocks show steady rise

Durable goods producers added \$1.4 billion to their inventories from September 30 to December 31, 1967, after seasonal adjustment, and expect to match these additions in each of the first two quarters of this year. If realized, the value of inventories held by durable goods producers would rise to \$56.7 billion at midyear—equal to 2.22 months of shipments anticipated for the second quarter. The stock-sales ratio both in the middle and at the end of 1967 was 2.28.

Nondurable goods producers expect to increase stocks over \$½ billion in the first quarter of 1968 and again in the second. Stocks rose \$200 million in the final quarter of 1967 after changing very little in the two preceding quarters. The book value of nondurable goods producers' stocks would reach an estimated total of \$29.6 billion in mid-1968. The stock-sales ratio, which declined throughout 1967 to 1.26 at yearend, is expected to hold at about this figure through the second quarter.

Sales projections strong

Durable goods producers expect seasonally adjusted sales to rise 6 percent from the fourth quarter of 1967 to the first quarter of 1968, the largest quarterly increase in 3 years. A 2 percent sales gain is anticipated from the first to the second quarter of 1968. Sales had declined in the first half of 1967 and

CHART 3

Inventory and Sales Expectations

then rose 2 percent in each of the next two quarters.

Nondurable goods producers expect sales to rise 2 percent per quarter to midyear, after seasonal adjustment. Sales increased over 3 percent in the last quarter of 1967 after increases of 1 to 2 percent earlier in the year.

Inventory condition improves

On December 31, 1967, companies holding 31 percent of durable goods producers' stocks judged their inventories "high." Those holding 67 percent of stocks considered them "about right," and 2 percent were in the "low" category. The "high" ratio reached a peak of 37 percent on March 31 of last year and fell thereafter, with some acceleration in the rate of decline. The "high" ratio for primary metals pro-

ducers rose from 20 percent in March to 29 percent in June and then fell sharply to 18 percent at the end of the year. The "high" ratio for metal users fell steadily during 1967 from 41 to 32 percent (chart 4).

Nondurable goods producers reported a "high" proportion of 15 percent on

September 30 and December 31 of last year. This ratio was down 5 points from March and June 1967 but still exceeded the "high" proportion reported from June 1961 to September 1966. The "about right" was 81 percent at the close of 1967; the low was 4 percent, unchanged from June and September.

CHART 4

Condition of Manufacturers' Inventories

The percent of manufacturers' inventories judged "high" generally moved downward in the second half of 1967

Note.—The shaded area refers to the proportion of total inventories in each group held by manufacturers who considered their stocks high.

1. Anticipations reported by manufacturers in February 1968. Inventories have been corrected for systematic tendencies in anticipatory data.

Sources: U.S. Department of Commerce. Anticipations, Office of Business Economics; actuals, Bureau of the Census.

Business Investment and Sales Expectations, 1968

BUSINESSMEN'S 1968 capital budgets provide for a moderate increase over 1967 in expenditures for new plant and equipment. Current plans call for aggregate outlays of \$65.2 billion¹—\$3.6 billion or 6 percent more than in 1967. Last year, actual spending rose 2 percent, with higher prices accounting for all of the rise. Prices continued to increase and in early 1968 were 2½ percent above the 1967 average.

Most major industry groups plan to increase their outlays in 1968, according to the regular OBE-SEC survey of business spending intentions, conducted in late January and February. Exceptions are the iron and steel,

¹ This figure is adjusted for systematic biases in anticipated data. (See footnote 2, table 7, for a description of methodology.) Before such correction factors were applied, the anticipation was \$63.9 billion; the figure for manufacturing was \$27.7 billion, and for nonmanufacturing, \$36.2 billion. The net effect of the adjustments, which are applied to each industry, is to raise manufacturing by \$200 million and nonmanufacturing by about \$1.1 billion.

motor vehicle, textile, and chemical industries in manufacturing and the railroads in nonmanufacturing.

Capital expenditures, after declining in the first three quarters of 1967, rose 3 percent to a seasonally adjusted annual rate of \$62.7 billion in the fourth. Spending is expected to rise further to \$64.8 billion in the first 3 months of this year, to dip slightly to \$64.3 billion in the second quarter, and to increase to a \$66 billion annual rate in the second half. Industrial patterns within the year are mixed, but from the first to second half, increases are more frequent than declines.

The survey results also indicate that businessmen are looking forward to sizable sales improvements this year: 10 percent in manufacturing, 7½ percent in trade, and 7 percent in public utilities. These expectations suggest a further moderate expansion over current sales rates.

Realization of 1967 programs

In each of the first three quarterly surveys of 1967, businessmen reported that they spent less than they had previously planned; only in the last quarter of the year were expenditures larger than anticipated. The final result of the successive changes in programs was a 2 percent rise in actual outlays in 1967 over 1966, instead of the 4 percent increase programed early last year. This was the first downward revision of annual programs in 5 years and was undoubtedly related to the fact that sales turned out to be lower than anticipated a year ago.

Downward revisions last year were widespread among the industries. However, iron and steel manufacturers maintained their early plans, while public utilities and manufacturers of paper, petroleum, and nonautomotive

transportation equipment spent more than planned.

Factors affecting investment

The economic climate in early 1968 appeared generally favorable for the

68-3-6

realization of the moderate investment rise projected this year. Several factors that had a depressing effect on investment in the earlier quarters of 1967 changed direction later in the year and have continued to show an improvement. Corporate profits and industrial output rose sharply in the second half after declining in the first half. The decline in capacity utilization in manufacturing was halted in the fourth quarter. Business sales, which had changed little through most of 1967, moved up sizably after October for manufacturers and wholesalers and in the opening months of 1968 for retailers. However, there were still uncertainties regarding the possibility of higher taxes and interest rates.

Manufacturers' Programs

Manufacturers expect capital outlays in 1968 to total \$27.9 billion, 4½ percent higher than in 1967, with durable and nondurable goods producers contributing about equally to the rise.

The machinery industries—alone among the durable goods industries—are continuing to make substantial expansions in their investment programs. Electrical machinery producers are scheduling increases in capital outlays this year of 14 percent as compared with an actual increase of 4 percent

from 1966 to 1967; for nonelectrical machinery manufacturers, the corresponding increases are 12 percent and 3 percent respectively. The nonautomotive transportation equipment and "other durable goods" industries are expanding their investment programs for 1968 moderately. In contrast, iron and steel producers are now scheduling declines for 1968 as are motor vehicle and stone, clay, and glass firms. With the exception of electrical machinery and nonautomotive transportation equipment, the durable goods industries are scheduling a reduction in outlays from the first to the second half of the year.

Among nondurable goods industries, rubber anticipates the largest relative increase in investment this year—21 percent. The petroleum industry, which is scheduling a rise of 7½ percent for 1968, accounts for two-thirds of the increase over 1967 for nondurable goods. The food-beverage and other nondurable industries expect gains of about 5 percent, while the remaining soft goods industries are projecting little change. Nondurable goods manufacturers as a whole expect rising expenditures

throughout 1968, but the industry patterns are mixed.

Starts and carryover

Last year, investment in new manufacturing facilities fell 1 percent after increases in the neighborhood of 20 percent in each of the preceding 3 years (table 2). The decrease in new projects started in 1967 was much sharper—11 percent or \$3.3 billion. Starts declined in all of the major durable goods industries; in nondurables, decreases in textiles and chemicals were more than offset by increases in food, paper, and especially petroleum. The term "projects," as used here, includes all types of capital investment, ranging from the purchase of a single piece of machinery or equipment to the construction and equipping of a complete factory.

The volume of starts fell short of actual expenditures for the year as a whole, and backlogs declined by about \$1.2 billion over the year. Backlogs

CHART 7

Manufacturers' Plant and Equipment Expenditures

Data: OBE-SEC

U.S. Department of Commerce, Office of Business Economics

were about maintained or increased in machinery (including electrical), food, paper, and petroleum but fell in steel, autos, stone, textiles, and chemicals.

It is of interest to note that the industries in the former group are anticipating increases in expenditures from 1967 to 1968, while all of the latter expect decreases.

On a quarterly basis, backlogs apparently reached their peak around the middle of 1967, bringing to a halt a 5-year advance. Expenditures exceeded starts by \$1.1 billion in the third quarter of 1967 and by \$0.9 billion in the fourth quarter. Although backlogs fell in the fourth quarter in both durables and nondurables, starts in durable goods manufacturing seem to have increased, after seasonal allowances.

1967 capacity evaluation

In evaluating the adequacy of their December 31, 1967, plant and equipment facilities in relation to current and

prospective sales for 1968, manufacturers indicated a slight easing in needs as compared with evaluations made 3 months earlier. Companies owning 44 percent of fixed assets in manufacturing reported that they needed more facilities, as against 46 percent in September, 47 percent in December, 1966, and a high of 51 percent in March 1966. For durables, the percentage indicating a need for more facilities dropped from 49 to 38 during 1967, with decreases reported by both the metal fabricating and primary metals industry groups. Over the same period, the proportion of nondurable goods companies reporting inadequate facilities rose from 44 to 49 as sharply rising needs by petroleum companies were partly offset by reductions for food, beverage, and chemical companies.

1. Starts are estimated by adding changes in carryover to expenditures during the given period.

Sources: U.S. Department of Commerce, Office of Business Economics, and the Securities and Exchange Commission.

2. Includes industries not shown separately.

3. Revised.

Facilities viewed as "about adequate" for 1968 production requirements represented 51 percent of manufacturers' fixed assets as of December 31, up from both September and a year earlier. The rise was accounted for by heavy goods producers; percentages reported by nondurable goods producers were lower.

Companies reporting plant and equipment in excess of current and near-term needs accounted for only 5 percent of fixed assets at the end of December, a proportion that was maintained throughout 1967. There was a high degree of stability in this proportion in the heavy goods group, with a slight tendency toward decline in the nondurables.

Nonmanufacturing Programs

Investment in nonmanufacturing facilities, during 1967 and as programmed for 1968, provides a fairly steady though moderate upward thrust to business capital expenditures. Increases are widespread among the component non-

manufacturing groups, with the major exception of railroads.

Transportation programs mixed

Nonrail transportation firms are scheduling a substantial 16 percent rise for 1968—to \$4½ billion—on top of the 13 percent increase last year. Airline companies expect to invest more than \$2½ billion in 1968—a 20 percent increase from last year. After the sustained uptrend in 1967, airlines expect outlays to dip slightly in the first half of 1968 but to resume their rise in the second half. Expenditures by pipelines and trucking firms are also scheduled for considerable expansion during 1968. For the latter group, the increase would follow a cutback of one-seventh from 1966 to 1967.

Railroads are continuing to trim capital expenditures. Their programs call for a 17 percent reduction this year following a decline of one-fourth from 1966 to 1967. These companies had accelerated their outlays dramatically in the 1961-66 period—at an average annual growth rate of almost one-fourth.

The recent and proposed cutbacks center in equipment; outlays for road in the 1966-68 period are being maintained at a level of about \$400 million per year. The weakness in equipment programs shows up in unfilled orders for freight cars, which declined more than 50 percent during 1967. Shipments of freight cars in the fourth quarter of 1967 were about 30 percent below the fourth quarter of 1966, and the ratio of yearend backlogs to fourth quarter shipments was 4.5 as compared with 7.3 a year ago.

Public utilities up

The continued substantial expansion of investment by utilities constitutes one of the strongest areas in the recent investment picture. Electric utilities expect to spend \$8.2 billion this year, 10 percent more than in 1967. Last year,

U.S. Department of Commerce, Office of Business Economics

outlays increased by one-fourth, substantially more than anticipated early in 1967. Under current programs, expenditures are expected to rise in the first quarter and to level off in the remainder of the year on a seasonally adjusted basis.

Expenditures in 1968 by gas utilities are expected to rise 12 percent after a 3 percent decline in 1967. Spending is scheduled at a higher rate in the first half of 1968 than in the second.

The value of new investment projects started by public utilities in 1967 amounted to \$13.9 billion, up 30 percent or \$3.2 billion from 1966; the corresponding rise in expenditures was 18 percent. The total cost of projects initiated during 1967 exceeded expenditures by \$4 billion—bringing the end-of-year carryover to \$14.3 billion. Starts rose in the fourth quarter, but

somewhat less than might have been expected on a seasonally adjusted basis.

Communications companies are programming a rise of 9 percent to \$6½ billion for 1968, as compared with a 5 percent rise last year. After a 3 percent decline in 1967, commercial firms are raising their investment by 2 percent in 1968 to \$12.6 billion, with the increase attributable to wholesale, retail, and construction firms. Most of the component industries are anticipating a pickup in the second half.

Sales Expectations

Manufacturing, trade, and utilities companies are expecting substantially larger sales advances in 1968, more than the actual increases experienced in 1967 (table 1). The anticipated 1968

increase for durable goods manufacturing is 11½ percent, for nondurable goods producers, 8½ percent. Wholesale and retail trade firms are looking forward to sales advances of 6 percent and 8½ percent respectively, while utilities are thinking in terms of a 7 percent gain for 1968. Actual sales of manufacturers and trade firms last year fell short of expectations while those of public utilities were about in line.

When the annual sales expectations for manufacturing and trade are compared with the seasonally adjusted sales rates in early 1968 (rather than with those for 1967), they each imply further advances of about 3 percent. The further gains are widespread among the manufacturing industries; exceptions are chemicals and stone, clay, and glass.

1. Data exclude expenditures of agricultural business and outlays charged to current accounts.

2. Estimates are based on anticipated capital expenditures reported by business in late January and February 1968. The estimates for the first quarter, second quarter, and second half of 1968 have been adjusted when necessary for systematic tendencies in anticipatory data. The adjustment for each industry and time period is based on the median ratio of actual to anticipated expenditures for the past 5 years. However, no adjustment is made unless the anticipations have shown a bias in the same direction in at least 4 of the last 5 years and in at least two-thirds of the last 9 years.

3. Includes fabricated metal, lumber, furniture, instrument, ordnance, and miscellaneous industries.

4. Includes apparel, tobacco, leather, and printing-publishing.

5. Includes trade, service, finance, and construction.

NOTE.—Details may not add to total because of rounding. Data for earlier years were published in the June 1956, March 1958, 1960, 1961, 1962, 1963, 1964, 1965, 1966, and 1967 issues of the SURVEY.

The U.S. Balance of Payments in the Fourth Quarter and Year 1967

THE U.S. balance of payments deteriorated sharply in the final quarter of 1967. Measured on the liquidity basis, the balance after seasonal adjustment was adverse by \$1,850 million in the fourth quarter, about \$1,200 million more than in the third. For 1967 as a whole, the deficit was \$3,575 million, as compared with \$1,360 million in 1966.

On the official reserve transactions basis, the balance was adverse by \$1,200 million in the fourth quarter after a \$450 million surplus in the third. For 1967, the deficit measured on this basis was \$3,400 million, as

compared with a \$225 million surplus the year before.

Official reserve assets

Although the balance of payments measured on either the liquidity or the official reserve transactions basis was adverse by an exceptionally large amount, official reserve assets rose \$181 million in the fourth quarter. This was the third consecutive quarter in which reserve assets have risen. In the fourth quarter, however, the composition of U.S. reserve assets underwent a major change. Gold holdings declined \$1,012 million, while holdings of con-

vertible currencies increased \$1,145 million and the U.S. gold tranche position in the IMF improved \$48 million. The fourth quarter decline in gold holdings was exceeded only in the second quarter of 1958, when European countries made a major attempt to rebuild their official gold reserves. In the fourth quarter of last year, only a relatively small part of the gold sold by the United States moved into foreign official reserves.

To a large extent, the rise in convertible currency holdings reflected currency swaps that United States and British monetary authorities made in

CHART 9

U.S. Balance of International Payments—Cumulative Quarterly Data

order to help the United Kingdom support the exchange value of sterling. The decline in gold reserves occurred primarily in December and reflected temporary uncertainties associated with the events surrounding the devaluation of the pound on November 18.

Changes in liquid liabilities

Liquid liabilities to foreign residents increased during the fourth quarter by about \$2,080 million, of which \$1,320 million was accounted for by liabilities to foreign official agencies and \$760 million by liabilities to foreign private banks, private residents, and international organizations other than the IMF.

Several developments affected the distribution of liquid liabilities between those to private and those to official accounts. About \$150 million of the rise in foreign official holdings of liquid dollar assets may have been due to seasonal shifts from foreign private banks to central banks in order to improve the yearend positions of the

former. After seasonal adjustment, the fourth quarter increase in foreign private dollar holdings came to slightly more than \$900 million, an extraordinarily large amount as compared with the longrun trend in such holdings but less than the \$1.2 billion increase in the third quarter. The fourth quarter rise in dollar assets in foreign private accounts was the net result of large reductions in some foreign accounts (presumably made to pay for the large private gold purchases), some conversions of dollar assets into foreign currency assets, and more than compensating increases in other accounts. To a large extent, the rise in dollar holdings in foreign private accounts in both the third and the fourth quarter was due to shifts by foreign residents from sterling into dollar assets.

The fourth quarter rise in foreign official holdings of dollars, which was exceptionally large even after adjustment for seasonal variation, reflected first, proceeds from gold sales made by foreign central banks and second,

conversions of dollars into other currencies by private foreigners.

The balances

The \$181 million rise in U.S. official reserve assets and the \$2,084 million increase in liquid liabilities to all foreign residents account for a fourth quarter adverse balance on foreign transactions of \$1,903 million measured on the liquidity basis. After seasonal adjustment, this balance was about \$1,850 million, as was mentioned above.

The \$181 million rise in U.S. official reserve assets, combined with the \$1,324 million increase in liquid liabilities and a \$247 million increase in other liabilities to foreign official organizations, accounted for a fourth quarter adverse balance of \$1,390 million measured on the official reserve transactions basis. Seasonal adjustments reduced this balance to about \$1,200 million.

Major fourth quarter changes

The major changes in the international transactions of the United States are indicated in chart 10, which shows that for the first time in the last 8 years a major decline in the balance on goods and services coincided with a major increase in net capital outflows. Usually these two major balances have moved in opposite directions and thus their effects on the balance of payments as a whole have canceled one another out to a large extent. This time the effect of their movements was additive and contributed to the extraordinary deterioration in the balance of payments.

The most important changes accounting for the sharp deterioration of the balances measured on either basis (shown in table A) were:

(1) An \$830 million deterioration in the credit balance on nonmilitary merchandise trade, as imports increased \$660 million and exports declined \$170 million;

(2) The liquidation by the United Kingdom Government of its portfolio of U.S. corporate securities and U.S. Government agency bonds, which accounted for most of the \$520 million

CHART 10

Balances on Goods and Services and on Capital Transactions

* Exclude nonscheduled repayments of U.S. Government credits and long-term liabilities of U.S. banks.

adverse change in transactions in U.S. securities, other than Treasury issues, by United Kingdom residents;

(3) A \$40 million increase in net debits on Government grants and capital transactions, due mainly to changes in Government liabilities on military contracts, while grants and new loans to foreign countries remained unchanged;

(4) A \$170 million decline in the net credit balance on unrecorded transactions, from net receipts of \$210 million in the third quarter to about \$40 million in the fourth. Even after the decline, this balance remained more favorable than the quarterly average in recent years.

The adverse changes were partly offset by:

(1) A \$75 million decline in the net outflow of private U.S. and foreign capital other than liquid funds. This reflected a \$535 million rise in the net outflow of corporate funds offset by a \$470 million favorable shift in the movement of banking funds and a \$150 million improvement in the balance on transactions in U.S. and foreign securities (omitting the British liquidations and other special transactions);

(2) A \$230 million improvement in the balance on goods and services other than nonmilitary merchandise trade—due mainly to a decline in travel expenditures and an increase in transfers under military sales contracts—and in private remittances and Government transfer payments;

(3) A \$50 million increase in net investments by foreign official and international agencies in time deposit certificates and time deposits, Government agency bonds, and certain nonmarketable, nonconvertible Government bonds with an original maturity of 1 year or more. Many of the time deposits, time deposit certificates, and Government agency bonds approach in liquidity those that are classified as liquid liabilities. Net foreign investments in such financial instruments affect the balance measured on the liquidity basis, but to the extent that they are made by foreign official agencies, they have no effect on the balance measured on the official reserve transactions basis.

Temporary factors in fourth quarter balance

The large adverse balance in the fourth quarter can be attributed in part to developments that are likely to affect the balance of payments for only a relatively short period. Among the latter were the strike in the copper industry and the stockpiling of steel in anticipation of a strike later this year. These and other temporary fluctuations may have raised fourth quarter imports about \$150 million to \$200 million above the amount they might have been otherwise. Short-term investments abroad by U.S. corporations were also exceptionally high as compared with previous experience, and were not likely to have continued at that rate. In any case, the present program to restrain capital outflows can be expected to prevent similar outflows and to result in repatriations of some of these funds. Another temporary adverse development was the liquidation by the British Government of its securities portfolio.

These adverse developments were offset by a more favorable balance on unrecorded transactions than has generally been the case and, in the balance measured on the liquidity basis, by net receipts of \$160 million from investments by foreign official agencies and international institutions in time deposits, time deposit certificates with an original maturity of 1 year or more, and U.S. Government agency bonds. Altogether, these temporary developments and special financial transactions may have adversely affected the fourth quarter balance measured on the liquidity basis by roughly \$600 million to \$700 million. In the previous quarter, temporary developments and special financial transactions were estimated to have improved the balance about \$300 million.

Goods and Services

The balance on goods and services declined to about \$700 million in the fourth quarter from \$1.4 billion in the

2. Net of conversion of long-term certificates of deposit into nonmarketable, nonconvertible, medium-term U.S. Government securities in the third quarter.

of lower shipments under Government assistance programs. Exports to less developed countries are also affected by business conditions in the more advanced countries several quarters earlier, and fourth quarter exports may still have been influenced by the relatively slow rate of business expansion in the United States as well as in several European countries in the first half of 1967.

Income on investment

Income on U.S. direct investment abroad, after seasonal adjustment, was about the same as in the third quarter. Incomes from Latin America and the Near East continued to reflect the higher oil profits that followed the closing of the Suez Canal. The increase in incomes from the United Kingdom in the fourth quarter reflected special dividends, and the rise in incomes received from the European Economic Community was due principally to a major special dividend that was re-invested and that is included in the direct investment outflow figure. Incomes from Canada, which in the second and third quarters of 1967 had been higher than a year earlier, in the fourth quarter were \$50 million less than a year ago. These changes in quarterly incomes from a year ago may reflect shifts in the timing of dividend distributions rather than changes in earnings.

Other goods and services

U.S. travel expenditures in foreign countries, after seasonal adjustment, dropped about \$150 million in the fourth quarter. The decline reflected the ending of the exceptionally large volume of travel to the Canadian exposition in Montreal that occurred in the second and third quarters.

Travel expenditures in the United States by foreign residents, after seasonal adjustment, rose slightly in the fourth quarter. This increase, together with the much larger decline in U.S. travel expenditures, resulted in an overall improvement of about \$160 million in the balance on travel expenditures.

Deliveries under military sales contracts in the fourth quarter were ap-

parently close to those in the first and second quarter. In the third quarter, they had been about \$100 million less.

On the basis of preliminary information, military expenditures abroad in the fourth quarter are estimated to have been \$1,110 million, about \$20 million above the third quarter. Payments to the United Kingdom rose about \$35 million to \$78 million, with the increase reflecting U.S. expenditures in the United Kingdom for military equipment under an offsetting agreement. Expenditures in Japan and the combined area of "other Asia and Africa" increased about \$15 million,

reaching \$590 million, or \$2,360 million at an annual rate. This compares with \$840 million in 1964, before the military buildup in the Far East began. However, preliminary estimates of military expenditures are often based on incomplete records, and final figures have frequently involved some upward revision.

Private remittances dropped about \$30 million in the fourth quarter to a normal level. In the second quarter and, to a lesser extent, in the third, these remittances included extraordinary contributions to Israel. U.S. Government pensions and other trans-

1. Balance of payments basis.

fers also fell back to previous levels, after a \$60 million increase in the third quarter that represented payments on settlements of two special World War II claims.

Government Grants and Capital Transactions

U.S. Government grants and capital outflows increased about \$125 million from the third quarter but after seasonal adjustment were about unchanged at \$1,210 million. Most of the unadjusted increase was in sales under farm product disposal programs and in Export-Import Bank loan disbursements. Disbursements under the Foreign Assistance Act declined, reflecting the delays that occurred last fall in congressional authorization for the program. Capital subscriptions to international financial organizations also dropped off, mainly because of reduced drawings on letters of credit by the International Development Association.

Use of foreign currencies by the U.S. Government other than for grants and credits declined to \$65 million in the fourth quarter from \$140 million in the third. Use of these funds to meet U.S. military obligations was exceptionally large in the third quarter and represented expenditure of Vietnamese funds acquired through the repayment of earlier loans by Vietnam. These changes are included in the foreign currency operations indicated in lines A. 23 and A. 24 of table 5.

Government liabilities associated with military transactions decreased \$140 million after seasonal adjustment. This decrease in net liabilities resulted from current transfers of \$360 million in goods and services under outstanding military sales contracts and \$220 million in receipts of new funds for current and future deliveries. The \$220 million included \$115 million of cash, while the remaining \$105 million was provided through U.S. Government credits.

The fourth quarter decrease of \$140 million in Government liabilities associated with military transactions and the drop of \$60 million in the third quarter were the first substantial reductions in these liabilities, which had increased for an extended period. The decline reflected the drop in German prepayments for military equipment. These prepayments were partly replaced by German purchases of medium-term, nonconvertible U.S. Government bonds amounting to \$500 million in fiscal year 1968, distributed equally over the four quarters. U.S. Government receipts from scheduled principal repayments increased about \$30 million to \$260 million, after seasonal adjustment. Before adjustment, they were \$338 million and included the annual payments received on the British loan as well as higher principal collections on military credits.

Private Capital Transactions

The movement of private U.S. and private foreign capital—excluding the

transactions listed in table B and excluding changes in liquid liabilities reported by U.S. banks—resulted in a net outflow of about \$1 billion after seasonal adjustment. This was close to the total of \$1.1 billion in the third quarter, but higher than the quarterly average net outflow of \$0.7 billion in the first two quarters of the year.

Although the fourth quarter change in the total of these capital movements was relatively small, there were major changes in some of the components.

Corporate investments

The net outflow of corporate capital for direct as well as for other investments increased more than \$500 million, from about \$600 million in the third quarter to \$1.1 billion in the fourth. The fourth quarter outflow of capital for direct foreign investments by U.S. corporations exceeded \$800 million after seasonal adjustment. This was about the same as in the two preceding quarters if allowance is made for major transactions in these periods that merely resulted in shifts between direct investments and other categories of capital assets. (These shifts were mentioned in earlier issues of the SURVEY.)

Total capital outflows to foreign affiliates in the fourth quarter of 1967 were about \$185 million less than a year earlier. Although outflows to Europe were \$285 million smaller and those to Canada declined \$245 million, outflows to other areas increased \$345 million.

The area distribution was affected by corporate reorganizations that resulted in transfers of assets, amounting to not quite \$100 million, from affiliates in Western Europe to shipping companies incorporated in Liberia and Panama. (These transfers are shown in table 8 under "international organizations and unallocated.") Other factors, particularly the slowdown in the business expansion in other industrialized countries earlier in 1967, the investment policies requested under the voluntary program to restrain capital outflows to industrialized countries, and an apparent spurt in the development of mineral and petroleum resources, also affected the area distribution of capital outflows for direct investments.

1. Amounts transferred to foreign affiliates not known; net capital outflows on program basis may be understated, therefore.

It should be noted that data on capital outflows for direct investments reported in the balance of payments tabulations differ somewhat from those reported under the present and previous programs to restrain such capital outflows. The principal differences are the exclusion from these programs of (1) capital outflows through purchases by U.S. residents other than the parent companies of securities issued by foreign affiliates, (2) investments by U.S. financial corporations (which are covered under the program administered by the Federal Reserve Board), and (3) funds that had been obtained through borrowing from foreign sources by U.S.-incorporated companies. The tabulation on p. 20 (table D) shows these adjustments.

The large increase in foreign investments by U.S. corporations was in investment claims on unaffiliated foreign residents. After seasonal adjustment, the movement of funds for such investments shifted from a net inflow of about \$80 million in the third quarter to a net outflow of about \$460 million in the fourth, for a total change of \$540 million.

The fourth quarter outflow of \$460 million included about \$100 million in long-term claims, possibly commercial credits on capital goods including aircraft. The more than \$360 million outflow of short-term funds was invested in U.S. dollar assets, mainly in Europe and Canada; therefore, it cannot be attributed to fears concerning the future exchange value of the dollar. An increase in yields on Euro-dollar deposits relative to those on U.S. certificates of deposits may have contributed to the outflow. However the rise in the spread in the fourth quarter was partly seasonal. Moreover, in the fourth quarter of 1967, it was considerably less than in the corresponding 1966 period while the outflow of U.S. funds was substantially higher. The increase may reflect the improvement in the corporate cash position, as compared with the last quarter of 1966, in addition to other considerations that may also have contributed to the buildup of corporate funds abroad.

The seasonally adjusted capital flows through changes in foreign assets and liabilities of U.S. corporations are summarized in table E.

Banking transactions

The large fourth quarter increase in capital outflows through investments by U.S. corporations in foreign assets other than their own affiliates was largely offset by a shift in the movement of claims on foreigners reported by U.S. banks. In the third quarter, there was a net outflow of nearly \$400 million of such funds, but in the fourth quarter, this changed to an inflow of nearly \$100 million. The shift becomes apparent only after the figures are adjusted for seasonal variations; the unadjusted figures show an increase in net outflows from about \$150 million in the third quarter to \$240 million in the fourth.

The adjustments reflect the seasonal movements of short-term banking funds over several years, mainly to Japan, Canada, and Latin America. Although net outflows to these areas continued to increase from the third to the fourth quarter, as in previous years, the size of the third to fourth quarter shift was somewhat less than in the 2 preceding years. There was also a considerable repatriation of short-term funds from Europe. All of these developments may reflect the effects of the program to restrain capital outflows, including the changes in the program that were announced in the middle of November.

Transactions in securities

In the fourth quarter, there was a seasonally adjusted net capital inflow of \$40 million resulting from transactions in foreign and U.S. securities other than Treasury issues—excluding the sale of

new securities by U.S. corporations to finance their foreign investments (which are covered above under corporate capital movements) and the special security transactions included in table B. This inflow may be compared with a net outflow of \$110 million in the third quarter.

U.S. purchases of foreign securities newly issued in U.S. markets declined from the exceptionally large amount of over \$500 million in the third quarter to nearly \$400 million in the fourth. However, they were still larger than in most other quarters since the summer of 1963 when the Interest Equalization Tax (IET) became effective. The large amount of new issues in the third quarter included about \$60 million of extraordinary sales by Israel; these sales fell in the fourth quarter. Furthermore, sales by international and regional institutions declined from \$140 million in the third quarter to \$50 million in the fourth.

Transactions in outstanding foreign securities continued to result in net U.S. purchases, which rose to more than \$80 million from over \$70 million in the preceding quarter. In both of these periods, net purchases of foreign bonds were higher than those of foreign stocks. Most of these securities were Canadian. From the time the IET became effective until the middle of 1967, transactions in outstanding foreign securities usually resulted in net U.S. sales; the experience in the third and fourth quarters of 1967 thus represents a major change.

The rise in U.S. purchases of foreign securities in the third quarter was more

than offset by a sharp increase in net foreign purchases of outstanding U.S. securities, mainly stocks. Such purchases increased further in the fourth quarter (table G). The sale of U.S. securities to foreign investors was one of the major developments favorable to the U.S. balance of payments in the second half of last year.

Major 1966-67 Changes

Table A shows the changes in major categories of transactions that account for the more than \$2.2 billion deterioration in 1967 in the balance measured on the liquidity basis and the more than \$3.6 billion deterioration in the balance measured on the official reserve transactions basis. The principal conclusions derived from these figures are:

(1) The surplus on goods and services transactions declined \$300 million, which appears to have been only a small factor in the deterioration of the overall balance of payments. However, it may be more appropriate to compare this decline with earlier expectations of a considerable increase. This increase did not materialize, mainly because of the rapid rise in merchandise imports in the last quarter of 1967 and the failure of merchandise exports to expand after the first quarter.

(2) Private remittances rose nearly \$200 million, reflecting a temporary increase related to the conflict in the Middle East in June.

(3) Net outflows of private U.S. and foreign capital (other than the special financial transactions listed in table B and the changes in liquid funds) rose

about \$600 million in 1967. U.S. capital outflows net of the rise in foreign liabilities by U.S. corporations increased \$1.5 billion. The increase stemmed from larger net outflows through banking and securities transactions. The outflow of corporate funds net of the rise in foreign liabilities was actually \$200 million smaller than in 1966.

These adverse developments were partly offset by a \$700 million increase in net sales of outstanding U.S. corporate securities to foreigners (omitting the new issues of U.S. corporations to finance their foreign investments), and a \$200 million rise in other foreign investments in the United States.

(4) Government transfers, grants, and capital transactions, excluding receipts from advance debt repayments by foreigners and excluding a foreign conversion of a medium-term certificate of deposit into medium-term non-convertible Government notes, resulted in a \$160 million increase in net debits.

(5) Errors and omissions added about \$300 million to the debits. These and smaller changes in other transactions raised net payments in 1967 approximately \$1.5 billion over 1966. In addition, net receipts from the special financial transactions listed in table B declined nearly \$0.7 billion, mainly because advance repayments of foreign loans declined, and official British sales of U.S. securities increased.

Transactions With EEC

U.S. international transactions with the European Economic Community (EEC) are shown for the first time in table 8 for the year 1966 and for the four quarters of 1967. Quarterly data for 1966 will be included in the June SURVEY.

The data on international transactions with the EEC, and also with the United Kingdom, are subject to certain reservations, since some transactions may have been reported by the initial rather than the ultimate party to the transactions. The financial data for the EEC are especially affected since Switzerland and the United Kingdom are major European financial centers,

^p Preliminary.

1. Data reflecting revised Census Bureau export and import figures for 1966 and 1967 will appear in the June 1968 issue of the SURVEY.

2. Consists mainly of exports of military equipment under Defense Department sales contracts with foreign governments to the extent that such exports are included in the Census data. Also includes exports of domestically owned goods into storage abroad (e.g., U.S. grain stored in Canada); exports to the Panama Canal Zone; and exports of exposed motion picture film for rental rather than sale.

3. Includes exports of domestically owned goods out of storage abroad (e.g., U.S. grain sold from storage in Canada); exports of electrical energy; exports of nonmonetary gold and silver, and net sales of gold by U.S. private residents to the U.S. monetary gold stock; personal remittances in kind (gift parcels sent through the mail); and transfers, financed under non-military aid programs, of goods to recipient countries from Defense Department stocks located abroad.

4. Includes valuation adjustments for goods considered to be underpriced or overpriced in Census data; timing adjustments for goods recorded in the Census data in one period but known to have been shipped in another period; and coverage adjustments for special situations in which shipments are omitted from the Census data.

5. Consists mainly of Defense Department and other imports which duplicate in whole or in part purchases (e.g., of nuclear materials) included in table 1, line 16 (Military expenditures). Also includes imports of domestically owned goods returned from storage abroad (e.g., grain from storage in Canada); imports from the Panama Canal Zone; and foreign charges for repair of U.S. vessels.

6. Includes imports of electrical energy; and imports of nonmonetary gold and silver, and net purchases of gold by U.S. private residents from the U.S. monetary gold stock.

NOTE.—Details may not add to totals because of rounding.
^r Revised. ^p Preliminary. *Less than \$500,000(±).

- As reported by the operating agencies.
- Consists of transfers of military goods and services financed by U.S. Government credits and of advance payments to the Defense Department (on military sales contracts) financed by credits extended to foreigners by U.S. Government agencies.
- Includes estimated net accumulations of foreign currency from principal repayments recorded in line A. 7.
- Transactions under military sales contracts are those in which the Defense Department sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis.

The data for the several categories of transactions related to military sales contracts in this and the other tables, for the periods beginning with the September 1964 quarter, are partially estimated.

5. Consists of transfers of military goods and services financed by U.S. Government credits (included in line B. 6) and of increases in Defense Department liabilities (on military sales contracts) which arise from advance payments to the Defense Department financed by credits to foreigners by U.S. Government agencies.

6. Includes securities payable in U.S. dollars and in convertible foreign currencies.

^p Preliminary. *Less than \$500,000 (±).

1. With maturity of 1 year or less; negotiable certificates of deposit with a maturity of 1 year or less are included with money market paper.

2. Includes liabilities of U.S. monetary authorities for gold deposited by and held for IMF.

Excludes dollar holdings of IMF except holdings acquired through gold sales to the United States with the option to reverse the transactions. These reversible transactions amounted to \$200 million in 1956, \$300 million in 1959, and \$300 million in 1960.

3. May include U.S. Government bonds and notes held by foreign commercial banks.

NOTE.—Details may not add to totals because of rounding.

r Revised. p Preliminary. n.a. Not available.

1. Total increase represents changes in reported gold reserves of foreign central banks and governments (including international organizations but excluding the countries of the Soviet bloc) net of convertible currencies included in U.S. official reserve assets (table 1, line 48) plus foreign liquid claims on the United States (table 1, lines 58 and 59) plus net changes in foreign IMF positions through U.S. dollar transactions (table 1, line 49).

Changes through known transactions with the United States represents for each of the separate areas shown the sum (with sign reversed) of table 8, lines 23, 25, 32, 41, and 51-57. For "All areas" line 60 is added, and for "All areas" and "International organizations and unallocated" line 23 is adjusted to exclude net sales or net purchases (-) of gold by U.S. private residents to the U.S. monetary gold stock. These were (in millions of dollars): 1966, year, -140; I, -34, II, -42; III, -29; IV, -35; 1967, year, -161; I, -32; II, -31; III, -39; IV, -59.

Changes through other transactions equals "Total increase" less "Changes through known transactions with the United States." For "All areas" this difference represents known acquisitions (+) or sales (-) of gold by foreign central banks and governments outside the United States. The net acquisitions of gold equal the excess of new gold production abroad plus sales by the Soviet bloc less net gold purchases by others. For each of the separate areas shown the difference reflects net gold and dollar receipts (+) or payments (-) resulting from their transactions with countries other than the United States, net of changes in their convertible currencies included in U.S. official reserve assets resulting from U.S. transactions with other areas, and from unrecorded transactions with the United States.

2. Includes transactions with shipping companies operating under the flag of Honduras, Liberia, and Panama.

Balance of Payments

(Continued from page 22)

and many transactions attributed to these countries may have been for the account of EEC countries. In such instances, data for Western Europe as a whole would be more satisfactory than the data for separate European areas.

The U.S. surplus on nonmilitary merchandise trade with the EEC fell from \$1,300 million in 1966 to \$800 million in 1967. The sharp reduction reflected a decline of \$135 million in exports and a rise of \$365 million in imports. Net payments of nearly \$700 million for military transactions and of \$100 million for other goods and services were about the same as in 1966. The balance on goods and services, therefore, was close to zero in 1967.

U.S. Government capital transactions with the EEC resulted in net receipts of about \$300 million in 1967, as compared with \$535 million in 1966. The decline in receipts reflected mainly the absence of nonscheduled repayments of U. S. Government credits. In 1966, such repayments were \$410 million.

The unfavorable shifts in the balances on goods and services and U.S. Government capital through transactions with the EEC were partly offset by reported favorable changes in capital flows between the United States and the EEC. U.S. direct investment in EEC countries fell about \$300 million to \$840 million; the liquidation of U.S. banking claims increased \$150 million, and EEC purchases of U.S. securities rose over \$100 million.

The balance on recorded transactions other than changes in U.S. official re-

serve assets and in U.S. liquid liabilities with the EEC countries resulted in net U.S. receipts of about \$500 million in 1966 and about \$300 million in 1967. However, the EEC countries received large amounts of dollars through a combination of unrecorded transactions with the United States and transactions with other foreign countries in Europe and other areas; these made it possible for the EEC countries to raise their gold reserves and dollar holdings.

The gold reserves and recorded private and official dollar holdings of the EEC countries as recorded by U.S. banks increased nearly \$900 million in 1966 and over \$1.0 billion in 1967. In addition, large amounts of liquid dollar assets are held by EEC residents in banks in the United Kingdom and in other non-EEC countries for which no data are available.

CURRENT BUSINESS STATISTICS

THE STATISTICS here update series published in the 1967 edition of BUSINESS STATISTICS, biennial statistical supplement to the SURVEY OF CURRENT BUSINESS. That volume (price \$2.50) provides a description of each series, references to sources of earlier figures, and historical data as follows: For all series, monthly or quarterly, 1963 through 1966 (1956-66 for major quarterly series), annually, 1939-66; for selected series, monthly or quarterly, 1947-66 (where available). Series added or significantly revised after the 1967 BUSINESS STATISTICS went to press are indicated by an asterisk (*) and a dagger (†), respectively; certain revisions for 1966 issued too late for inclusion in the 1967 volume appear in the monthly SURVEY beginning with the September 1967 issue. Also, unless otherwise noted, revised monthly data for periods not shown herein corresponding to revised annual data are available upon request.

¹ Revise d. ² Preliminary.

³ Estimates for Jan.-Mar. 1968 based on anticipated capital expenditures of business.

⁴ Estimates for Apr.-June 1968 based on anticipated capital expenditures of business.

Anticipated expenditures for the year 1968 are as follows (in bil. \$.): All industries, 65.23; manufacturing, total, 27.93; durable goods industries, 14.39; nondurable goods industries, 13.54; mining, 1.58; railroad, 1.27; transportation, 4.51; public utilities, 10.88; communication, 6.45; commercial and other, 12.60. ⁵ Includes communication.

⁶ Includes inventory valuation adjustment.

⁷ Personal outlays comprise personal consumption expenditures, interest paid by consumers, and personal transfer payments to foreigners.

⁸ Personal saving is excess of disposable income over personal outlays.

⁹ Data for individual durable and nondurable goods industries components appear in the Mar., June, Sept., and Dec. issues of the SURVEY.

¹⁰ More complete details are given in the quarterly reviews in the Mar., June, Sept., and Dec. issues of the SURVEY.

¹ Revised. ² End of year. ³ Beginning Dec. 18, 1967 Aaa railroad bonds not included.
⁴ Includes data not shown separately.
⁵ Number of bonds represented fluctuates; the change in the number does not affect the

continuity of the series.
⁶ Prices are derived from average yields on basis of an assumed 3 percent 20-year bond.
⁷ For bonds due or callable in 10 years or more.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS	1966	1967	1967												1968

¹ Revised. ² Preliminary. ³ Revised total; monthly revisions are not available. ⁴ Data reflect sales from the Government stockpile.
⁵ Total for 11 months. ⁶ Less than 50 tons. ⁷ Reported yearend stocks. See BUSINESS STATISTICS for note. ⁸ Jan.-Aug. average. ⁹ Consumers' and secondary smelters' lead stocks in refinery shapes and in copper-base scrap.
¹⁰ Effective 1966, estimates are derived from a new sample and are not directly comparable with earlier data; see note in Feb. 1967 SURVEY. ¹¹ Producers' stocks elsewhere, end of Feb. 1958, 11,200 tons.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS	1966	1967	1967												1968

Revised. ¹Data cover 5 weeks; other months, 4 weeks. ²Ginnings to Dec. 13. ³Ginnings to Jan. 16. ⁴Crop for the year 1966. ⁵Dec. 1 estimate of 1967 crop.

Includes data not shown separately. ⁶Stocks (owned by weaving mills and billed and held for others) exclude bedsheeting, toweling, and blanketing, and billed and held stocks of denims.

Unfilled orders cover wool apparel (including polyester-wool) finished fabrics; production and stocks exclude figures for such finished fabrics. Orders also exclude bedsheeting, toweling, and blanketing.

Total ginnings to end of month indicated, except as noted.

Unless otherwise stated, statistics through 1966 and descriptive notes are shown in the 1967 edition of BUSINESS STATISTICS

BUSINESS STATISTICS 1967 Biennial Edition

THE SIXTEENTH VOLUME in a series of statistical supplements to the monthly SURVEY OF CURRENT BUSINESS, the new edition provides, for the past quarter century, historical data for more than 2,500 series.

For most series, annual data are presented back to 1939. Quarterly statistics back to 1956 are shown for those series ordinarily published on a quarterly basis, and monthly data back to 1963 are given for monthly series. Also included in this volume is an appendix providing monthly or quarterly data back to 1947 for 350 of the more important economic series. Color keyed explanatory notes to the time series define terms, give sources of data, and describe the methods of compilation used.

Price, \$2.50. *Orders may be placed with the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, or with any Field Office of the*
